Kaizen Why? Programme

Behavior Based Safety Management

Behavior-based safety (BBS) is the application of kaizen to drive behavior change in safety management

Behavioral Based Safety is a process based on a Continual Improvement (Kaizen) based philosophy that reduces unsafe behaviors that can lead to incidents occurring in the workplace.

The process works by reinforcing safe behavior and identifying the causes of unsafe behavior such as: -

- All injuries can be prevented.
- Employee involvement is essential.
- Management is responsible for preventing injuries.
- All operating exposures can be safeguarded.
- Training employees to work safely is essential.
- Working safely is a condition of employment.
- Management audits are a must.
- All deficiencies must be corrected promptly.
- Off-the-job safety will be improved.

So how does it work?

This development programme is designed to be fun but challenging to the individuals concerned as it challenges beliefs and attitudes.
Not only does it impact on the way people think about safety at work it changes the way people lead their everyday lives.
Based on proven development techniques this training will change mindsets and habits, which have been formed over time.

What's in it for you?

This training will improve moral and encourage staff to become more pro-active in health and safety management.
This will in turn reduce accident rates and improve the "value add" of your safety management system.

It's a risky business!

- Do people have accidents?
- Do People take risks?
- Do people need to change?

Consequences of Poor Safety Behavior

- Prosecution, fines and imprisonment
- Compensation claims for damages
- Loss of output or service
- Replacement costs
- Retraining
- Loss of reputation
